

The Centro Nacional de Análisis Genómico (CNAG-CRG) is seeking a:

Data analyst for Personalized Medicine in Cancer Reference: PERIS Cancer Data Analyst

The Centro Nacional de Análisis Genómico (CNAG-CRG) is one of the largest Genome Sequencing Centers in Europe. CNAG-CRG researchers participate in major International Genomic Initiatives such as the International Cancer Genome Consortium (ICGC), the International Human Epigenome Consortium (IHEC), the International Rare Diseases Research Consortium (IRDiRC) and the European Infrastructure for life-science information (ELIXIR), as well as in several EU-funded projects.

We are looking for a bioinformatician to setup and carry out data analysis for a large scale Personalized Medicine Project in Cancer, recently funded by the Catalan Department of Health (PERIS 2017 call). The project aims to pilot a cancer clinical-genomics platform for the Catalan Health System.

The applicant should have a strong computational background and experience with cancer genomics data analysis. He/She will work in close collaboration with medical doctors and clinical researchers. The candidate must be pro-active and able to work independently on his/her specific projects and as part of a team. He/she will be conducting analyses and should be able to design analysis workflows and biologically interpret results. He/she will also be expected to contribute to the software development and benchmarking efforts of the CNAG-CRG.

We offer a competitive salary for one year (starting the 1st of April), with possibility of extension and career development.

Responsibilities:

1. Proactive data analysis in a cutting edge project on cancer, including workflow design, data mining, annotation, interpretation, reporting and scientific communication.
2. Development, maintenance and operation of bioinformatics pipelines.
3. Participate in the design of the clinical-genomics platform for the project.
4. Collaboration with the Catalan and International research communities.

Requirements:

1. A PhD or MSc in Bioinformatics, Biostatistics or related discipline and/or proven experience in the field.
2. A minimum experience of 1 year in the analysis of Next Generation Sequencing data and interpretation of results from Cancer related projects.
3. In-depth understanding of genetics, including Cancer genomics
4. Experience with Unix operating systems, including shell scripts.
5. Skilled programmer in languages such as Perl, Python or Ruby and R. Knowledge of Java, C++ or other programming languages will be highly valued.
6. Good spoken and written English.

Application procedure:

Interested candidates may submit a CV and a brief statement of experience and interests before **March 31st 2017** (23:59 local time) to the following recruitment portal:
