Job offer 2020/01	rrhh@glycardial.com	93 4031994

About us

GlyCardial Diagnostics is a spin-off company of the IR-Hospital de la Santa Creu i Sant Pau and the Spanish National Research Council (CSIC) focused on the development of a novel in vitro diagnostic device (IVD) for myocardial ischemia. The technology is based on the detection of Apo J-Glyc in blood as a biomarker for the early diagnosis of cardiac ischemia and the prediction of patient's evolution after an ischemic event.

The company was incorporated in September 2017, closed its first funding round of 2.4M€ in October 2017 and has raised more than 2.8M€ in public funding.

We are a small company willing to incorporate enthusiastic professionals that aim to be part of a disruptive project and to develop together with the company.

Job offer description

We are looking for a Research technician to work in the R+D area of our company.

Academic training and job requirements

Education

- University degree in Health Sciences

Knowledge and experience

At least 5 years of demonstrable experience in cellular, experimental, molecular and biochemical techniques:
