

Position for a Laboratory technician at our Drug Development Unit

Pangaea Oncology provides Molecular Diagnostics and R+D services in the field of personalized cancer treatment. In addition, we have R&D units in Biomarker Discovery, Molecular Diagnostic Assays and Drug Development. Founded in 2007, we have grown rapidly to become a reference laboratory in our field, and have established client relationships with some of the largest global pharmaceutical, diagnostics and biotech companies.

At our Drug Development Unit, we are committed to development of novel anticancer therapeutics. The Pangaea team is composed of prestigious clinical and research professionals, combining expertise in preclinical cancer research with extensive experience in biomarker discovery, drug development and diagnostic tools. Our Chief Scientific Officer is the international expert in translational cancer research Dr Rafael Rosell, and our Pathology Unit is led by renowned expert pathologist Dr Santiago Ramon y Cajal.

What we are looking for:

- Laboratory technician with 5+ years of experience.
- Demonstrated experience in cell culture and basic molecular biology techniques including cell proliferation assays, western blots, qPCR etc.
- Experience in cancer research preferred
- Proactive and very organized
- Good level of English required

What we offer:

- Laboratory technician position to work at our Drug Development Unit, based in IMPPC building, Can Ruti, Badalona.
- Will support Senior Scientist in *in vitro* studies involving cell culture and molecular biology techniques, will help in administrative tasks and will keep perfect record of all activities.
- Full time contract (40h) and permanent position
- Salary depending on experience
