“Single Cell Genomics – Postdoctoral Fellow”

Centro Nacional de Análisis Genómico (CNAG-CRG)

The Institute

The Centro Nacional de Análisis Genómico (CNAG-CRG) is one of the largest Genome Sequencing Centers in Europe. CNAG-CRG researchers participate in major International Genomic Initiatives such as the Human Cell Atlas Project (HCA), the International Cancer Genome Consortium (ICGC), the International Human Epigenome Consortium (IHEC), the International Rare Diseases Research Consortium (IRDiRC) and the European Infrastructure for life-science information (ELIXIR), as well as in several EU-funded projects. The CNAG-CRG aims to carry out large-scale projects in DNA/RNA sequence analysis for the improvement of quality of life in collaboration with the Spanish, European and International Research Community. The CNAG-CRG operates 6 Illumina and 4 Oxford Nanopore sequencing instruments together with an outstanding computing infrastructure (7.6 petabyte of data storage and 3472 cores of computing). The operation is certified ISO 9001 and accredited ISO 17025 and serves to deliver standardized, high quality data for research and clinics. Single-cell genomics and long-read sequencing are strategic priorities for CNAG-CRG.

The CNAG is integrated with the Centre for Genomic Regulation (CRG), an international biomedical research institute of excellence, based in Barcelona, Spain, with more than 400 scientists from 44 countries. The CRG shares principles of an interdisciplinary, motivated and creative scientific team that is supported by high-end and innovative technologies and a flexible and efficient administration. CRG has been conferred with a badge of 'HR Excellence in Research' by the European Commission, in recognition to its progress in implementing the European Charter for Researchers and the Code of Conduct for Recruitment of Researchers, that among others consists of transparent, merit-based recruitment procedures and attractive work-life balance working conditions.

The role

The candidate will be integrated in the Single Cell Genomics Team, a highly collaborative, international work environment with well-experienced colleagues in single-cell data production and analysis. We have openings for a Postdoctoral fellow through the EU-funded ERC-Synergy project BCLL@las. The BCLL@las project aims to understand chronic lymphocytic leukaemia (CLL) by applying multi-omic single-cell characterisation of B-cells before and throughout the course of the disease. The project further includes our contribution to the Human Cell Atlas (HCA) Project to produce an atlas of the human B-cell lineage. Topics for the position include the development of statistical methods to integrate multi-omic single-cell and spatial data as well as clinical patient information. We are looking for highly motivated and creative thinking individuals who are interested in working in an environment where the technical sophistication of single-cell analysis technology meets innovative approaches for interpreting data and generating new knowledge.

About the team

The Single Cell Genomics Team at the CNAG-CRG is dedicated to advance genome research of single cells. The mission of the group is the implementation of single-cell sequencing technologies and their application in a research and translational context. The group focuses on the systematic integration of transcriptional and epigenetic data from individual cells to elucidate causalities underlying phenotype formation. We successfully established sequencing protocols to quantify gene expression and open chromatin of thousands of single cells. Our newly developed computational pipelines include methods to deconvolute tissue composition and track to transcriptional dynamics. Our international team joins

centre nacional d'anàlisi genòmica
centro nacional de análisis genómico

computational, technical and biological knowledge in order to establish and apply best practices in single-cell research. The group combines collaborative research, development activities and follows an independent research line on translational cancer research. We are member of the Human Cell Atlas Project.

Whom would we like to hire?

Must Have

- You have completed a PhD in Bioinformatics, Mathematics, Statistics or similar.
- You are competent in Python, Perl or R.
- You have good knowledge of Computational Biology.

Desirable but not required

- You have experience in single-cell analysis.

Languages

- You are fluent in English.

Technical skills

- You have experience working with remote distributed job systems (e.g Slurm).

Competences

- You have highly developed organization and coordination skills.
- You are capable to work independently and coordinate part of a team.
- You have very good communication skills.

The Offer

- **Contract duration:** 3 years.
- **Estimated annual gross salary:** Salary is commensurate with qualifications and consistent with our pay scales.
- **Target start date:** March 2020.

We provide a highly stimulating environment with state-of-the-art infrastructures, and unique professional career development opportunities.

We offer and **promote a diverse and inclusive environment** and welcomes applicants regardless of age, disability, gender, nationality, race, religion or sexual orientation.

We are **committed to reconcile a work and family life** for our employees and are offering the opportunity to benefit from annual leave, flexible working hours and teleworking.

centro nacional de análisis genómico

Application Procedure

All applications must include:

1. A motivation letter addressed to Dr. Holger Heyn.
2. A complete CV including contact details.
3. Contact details of two referees.

All applications must be addressed to Dr. Holger Heyn and be submitted online on the CRG Career site - <http://www.crg.eu/en/content/careers/job-opportunities>

Selection Process

- **Pre-selection:** The pre-selection process will be based on qualifications and expertise reflected on the candidates CVS. It will be merit-based.
- **Interview:** Preselected candidates will be interviewed by the Hiring Manager of the position and a selection panel if required.
- **Offer Letter:** Once the successful candidate is identified the Human Resources department will send a Job Offer, specifying the start day, salary, working conditions, among other important details.

Deadline: Please submit your application by 15th of January, 2020

HR EXCELLENCE IN RESEARCH
